

CS-Stream

Reliable & Secured Video OTT Service

CS-Stream is a breakthrough service that allows users to deliver broadcast-quality video globally over the public Internet and private IP networks. It is built for contribution or primary distribution such as broadcasting, sports and live events, enterprise collaboration and content contribution or ingest. The service scales easily to multiple locations or millions of users. It is distance-insensitive, allowing video to move across the continent or across the globe through multiple ISPs without any loss in quality.

Application

- Teleport Contribution for uplink to SAT
- Operator Contribution (IPTV, Cable, SAT)
- Broadcasters' Contribution and primary distribution (remote studios, correspondent offices, regional programs)
- Enterprise businesses

Benefits

- Turnkey solution
- High reliability
- Flexible Service – short setup time, easy changes and growth
- Cost effective

Available Service Plans
